USAID GLOBAL HEALTH SUPPLY CHAIN PROGRAM

Procurement and Supply Management

Global Standards and Traceability Glossary of Terms

Version 2.0, November 2021

The USAID Global Health Supply Chain Program-Procurement and Supply Management (GHSC-PSM) project is funded under USAID Contract No. AID-OAA-I-15-0004. GHSC-PSM connects technical solutions and proven commercial processes to promote efficient and cost-effective health supply chains worldwide. Our goal is to ensure uninterrupted supplies of health commodities to save lives and create a healthier future for all. The project purchases and delivers health commodities, offers comprehensive technical assistance to strengthen national supply chain systems, and provides global supply chain leadership.

GHSC-PSM is implemented by Chemonics International, in collaboration with Arbola Inc., Axios International Inc., IDA Foundation, IBM, IntraHealth International, Kuehne + Nagel Inc., McKinsey & Company, Panagora Group, Population Services International, SGS Nederland B.V., and University Research Co., LLC. Term	Definition
automatic identification and	A technology used to automatically capture data. AIDC technologies include barcodes, smart
data capture (AIDC)*	cards, biometrics, and RFID. ¹
barcode*	A symbol that encodes data into a machine-readable pattern of adjacent, varying width,
h	parallel, rectangular or square dark and light spaces.
barcode verification*	The assessment of the printed quality of a barcode based on International Organization for Standardisation (ISO)/International Electrotechnical Commission (IEC) standards using ISO/IEC-compliant barcode verifiers.
batch/lot*	Associates an item with information the manufacturer considers relevant for traceability of the trade item.
brand owner*	The Organization that owns the specifications of a trade item, regardless of where and by whom it is manufactured. The brand owner is normally responsible for the management of the Global Trade Item Number (GTIN).
classification	A form of cataloguing, or identifying, products that can be defined as a process for grouping products into categories based on an understanding of the essential properties and relationships between them. A classification system is used to group like products such as medical devices versus pharmaceutical drugs. Example classification systems are UNSPSC, GPC, eClass, and ATC.
check digit*	Numeric character calculated from data and appended as part of the data string to ensure that the data is correctly composed and transmitted.
concatenation*	The representation of several element strings in one barcode.
data architecture	Models, policies, rules, or standards that govern how data is stored, managed, and utilized in an information system.
Data carrier	Any medium that can record and convey data; a medium that holds machine-readable data.
data governance	The development, execution, and supervision of policies, programs, and practices that standardize, collect, control, protect, deliver, and enhance the value of data and information assets.
data synchronization	The process of maintaining the consistency and uniformity of data instances across all consuming applications and storing devices.
Data Matrix	A standalone, two-dimensional (2D) matrix symbology that is made up of square modules arranged within a perimeter finder pattern.
EAN-13 barcode	The barcode of the EAN/UPC symbology that encodes a Global Trade Item Number (GTIN) for retail purposes
EAN-8 barcode*	A barcode of the EAN/UPC symbology that encodes GTIN-8 or RCN-8.
Electronic Product Code	An open standard which allows businesses to capture and share supply chain information
Information Services (EPCIS)	about the movement and status of goods, both within their enterprise and with their business partners.
event data	The information generated by an item as it moves through the supply chain. It includes the what, where, when, and status of an object each time the item's RFID tag is read.
Expiration date	The date up until which the drug manufacturer can guarantee that the medicine is fully potent and safe to take based on scientifically-sound product testing.
Global Data Synchronization Network (GDSN)	Connects interoperable data pools so pharmaceutical manufacturers, logistics providers, regulatory authorities, supply chain managers, and healthcare workers can share and use the same accurate information about health commodity orders.
Global Location Number (GLN)*	The GSI identification key used to identify physical locations or parties. The key comprises a GSI Company Prefix, location reference, and check digit.
Global Trade Item Number (GTIN)*	The GSI identification key used to identify trade items. The key comprises a GSI Company Prefix, an item reference and check digit.
GSI	A neutral, not-for-profit, global organization that develops and maintains the most widely used supply chain data standards in the world.
GS1-128 linear barcode	A barcode symbology using bars and spaces in one dimension that leverages a subset of Code 128 that is used exclusively for GS1 system data structures.
GSI Application Identifier*	The field of two or more digits at the beginning of an element string that uniquely defines its format and meaning.

¹ Definition taken from GS1 General Specifications 2021

A globally unique string of four to twelve digits assigned to an entity and identification keys. The first digits are a valid GSI Prefix and the length m longer than the length of the GSI Prefix. The GSI Company Prefix is isst. Member Organization. As the GSI Company Prefix varies in length, the i Company Prefix excludes all longer strings that start with the same digits as GSI DataMatrix* A subset of Data Matrix which uses the function that allows the encoding A global, voluntary user group that develops standards to advance global Healthcare consists of manufacturers, wholesalers, distributors, hospitals retailers and maintains close contacts with regulatory agencies and trade worldwide. It drives the development of GSI standards and solutions to the global healthcare industry and promotes the effective use and implem standards for the industry. GSI identification key* A unique identifier for a class of objects (e.g., a trade item) or an instance logistic unit). GSI Member Organization* A member of GSI that is responsible for administering the GSI system in assigned area). This task includes, but is not restricted to, ensuring user or correct use of the GSI system, have access to education, training, promore implementation support and have access to play an active role in the Glo Management Process (GSMP). GTIN-12* The 12-digit GSI identification key composed of a U.P.C. Company Prefix and check digit used to identify trade items. GTIN-13* The 13-digit GSI identification key composed of an indicator digit (1-9), or Prefix, item reference, and check digit used to identify trade items. GTIN-14* The 14-digit GSI identification key composed of a GSI-8 Prefix, item reference, and check digit used to identify trade items.	sust be at least one led by a GSI ssuance of a GSI from being issued g of element strings harmonization. GSI, and pharmacy Organizations meet the needs of mentation of global e of an object (e.g., a its country (or companies make otion, and bal Standards ex, item reference,
GSI DataMatrix* A subset of Data Matrix which uses the function that allows the encoding GSI Healthcare A global, voluntary user group that develops standards to advance global Healthcare consists of manufacturers, wholesalers, distributors, hospitals retailers and maintains close contacts with regulatory agencies and trade worldwide. It drives the development of GSI standards and solutions to the global healthcare industry and promotes the effective use and implem standards for the industry. GSI identification key* A unique identifier for a class of objects (e.g., a trade item) or an instance logistic unit). GSI Member Organization* A member of GSI that is responsible for administering the GSI system in assigned area). This task includes, but is not restricted to, ensuring user of correct use of the GSI system, have access to education, training, promod implementation support and have access to play an active role in the Glo Management Process (GSMP). GTIN-12* The 12-digit GSI identification key composed of a U.P.C. Company Prefix and check digit used to identify trade items. GTIN-13* The 13-digit GSI identification key composed of an indicator digit (1-9), or Prefix, item reference, and check digit used to identify trade items.	harmonization. GSI , and pharmacy Organizations meet the needs of nentation of global e of an object (e.g., a n its country (or companies make otion, and bal Standards x, item reference,

This task includes, but is not restricted to, ensuring user of correct use of the GSI system, have access to education, training, promot implementation support and have access to play an active role in the Glo Management Process (GSMP). GTIN-12* The I2-digit GSI identification key composed of a U.P.C. Company Prefix and check digit used to identify trade items. GTIN-13* The I3-digit GSI identification key composed of a GSI Company Prefix, check digit used to identify trade items. GTIN-14* The I4-digit GSI identification key composed of an indicator digit (I-9), 60 Prefix, item reference, and check digit used to identify trade items.	n its country (or companies make otion, and bal Standards x, item reference,
assigned area). This task includes, but is not restricted to, ensuring user of correct use of the GS1 system, have access to education, training, promotimplementation support and have access to play an active role in the Glo Management Process (GSMP). GTIN-12* The 12-digit GS1 identification key composed of a U.P.C. Company Prefix and check digit used to identify trade items. GTIN-13* The 13-digit GS1 identification key composed of a GS1 Company Prefix, check digit used to identify trade items. GTIN-14* The 14-digit GS1 identification key composed of an indicator digit (1-9), 6 Prefix, item reference, and check digit used to identify trade items.	companies make otion, and bal Standards
and check digit used to identify trade items. GTIN-13* The 13-digit GS1 identification key composed of a GS1 Company Prefix, check digit used to identify trade items. GTIN-14* The 14-digit GS1 identification key composed of an indicator digit (1-9), 0 Prefix, item reference, and check digit used to identify trade items.	
check digit used to identify trade items. GTIN-14* The 14-digit GS1 identification key composed of an indicator digit (1-9), 0 Prefix, item reference, and check digit used to identify trade items.	item reference, and
Prefix, item reference, and check digit used to identify trade items.	
CTIN 0* The 0 digit CCI identification less constant of a CCI 0 Ductive items and	GSI Company
digit used to identify trade items.	rence, and check
healthcare primary The first level of packaging for the product marked with an AIDC data ca	rrier either on the
packaging* packaging or on a label affixed to the packaging. For non-sterile packaging packaging can be in direct contact with the product. For sterile packaging packaging can be any combination of the sterile packaging system and ma item or group of items for a single therapy such as a kit. For packaging conclude a retail consumer trade item, primary packaging is a packaging lev consumer trade item.	s, the first level of y consist of a single onfigurations that el below the retail
healthcare secondary A level of packaging marked with an AIDC carrier that may contain one of	or more primary
packaging* packages or a group of primary packages containing a single item.	
human readable interpretation (HRI)* GSI AIDC data carriers confined to a GSI standard structure and forma readable interpretation is a one-to-one illustration of the encoded data. I shift, and function characters, as well as the symbol check character, are human readable interpretation.	t. The human However, start, stop, not shown in the
kit* A collection of different regulated healthcare items assembled for use in	
label And tag, brand, mark, pictorial, or other descriptive matter, written, prin marked, embossed, or impressed on or attached to a container of any m	edicinal product.
logistic unit* An item of any composition established for transport and/or storage that managed through the supply chain. It is identified with an SSCC.	
manufacturer An entity that makes or produces drugs, pharmaceuticals, or medical developrocess involving raw materials, components, or assemblies, usually on a	large scale.
marketing authorization holder (MAH) Any legal entity that holds are marketing authorization issues by the cour or organization to distribute and sell its pharmaceutical products in a given	en country.
master data The identification number and descriptive attributes of an object that are that provide more information or characteristics of the object identified.	static or nearly so
medical device Any instrument, apparatus, implement, machine, appliance, implant, in vit calibrator, software, material or other similar or related article, intended manufacturer to be used, alone or in combination, for human beings for a	by the
medical device Any instrument, apparatus, implement, machine, appliance, implant, in viticalibrator, software, material or other similar or related article, intended	by the any medical purpose.

point-of-sale (POS)*	Refers to the retail checkout where omnidirectional linear barcodes must be used to support
	high-volume laser-based scanning or low volume checkout where linear barcodes (or for regulated healthcare trade items, GSI DataMatrix) are used with image-based scanners.
Product	An object with a defined set of attributes or characteristics.
Pharmaceutical	Any substance or mixture of substance:
i nai maceuticai	a) used in the diagnosis, treatment, mitigation or prevention of human disease,
	disorder, abnormal physical or mental state, or the symptoms thereof;
	b) used in restoring, correcting or beneficial modification of organic or mental
	functions in humans;
	c) which are articles other than food, intended to affect the structure or any
	function of the body of humans; and
	d) which includes articles intended for use as a component of any articles specified in
	clause (a), (b) or (c).
pharmaceutical supply chain	The flow from the origin to the consumption of pharmaceuticals covering the
	manufacturing, import, distribution, transportation, storage, and dispensing stages, as well
	as other types of flows.
primary packaging	The first level of packaging for the product marked with a data carrier either on the
1 71 00	packaging or on a label affixed to the packaging. For non- sterile packaging, the first level of
	packaging can be in direct contact with the product. For sterile packaging, the first level of
	packaging can be any combination of the sterile packaging system and may consist of a single
	item or group of items for a single therapy such as a kit.
QR Code	A machine-readable code consisting of an array of black and white squares, typically used for
2 3040	storing URLs or other information for reading by the camera on a smartphone.
Radio frequency identification	A data carrier technology that transmits information via signals in the radio frequency
(RFID)*	portion of the electromagnetic spectrum. A radio frequency identification system consists of
(Id 12)	an antenna and a transceiver, which read the radio frequency and transfer the information to
	a processing device, and a transponder, or tag, which is an integrated circuit containing the
	radio frequency circuitry and information to be transmitted.
secondary packaging	The level of packaging marked with a data carrier that may contain one or more primary
secondary packaging	packages or a group of primary packages containing a single item.
serial number*	A code, numeric or alphanumeric, assigned to an individual instance of an entity for its
	lifetime. Example: a unique individual item may be identified with the combined Global
	Trade Item Number (GTIN) and serial number.
Serial Shipping Container	The GS1 identification key used to identify logistic units. The key comprises an extension
Code (SSCC)*	digit, GS1 Company Prefix, serial reference, and check digit.
solution provider	A vendor that provides products and/or technical or service support to a company. It offers
	companies hardware, software, guidance, resources, and tools in a variety of areas. Examples
	are barcode services, including labels, printing, designing, and verifying; barcode hardware,
	including printers, readers, and scanners; and barcode software.
supplier	An entity with which a procurement agent has a contractual relationship for providing one or
	more trade items. The supplier is involved or plays a role in the buying, selling, or production
	of the pharmaceutical or medical device and can be a manufacturer, brand owner,
	wholesaler, or distributor.
supply chain entity	Any person in the supply chain who manufactures, imports, distributes, transports, stores, or
	dispenses pharmaceuticals or is involved in related activities.
tertiary homogenous pack	A tertiary pack that consists entirely of the same trade item with the same batch number and
	expiration date.
tertiary mixed pack	A tertiary pack that contains either more than one unique trade item or entirely the same
	trade item with different batch numbers or expiration dates.
tertiary packaging	The highest level of packaging that may include a pallet that contains (one or usually) several
	cases or a case that contains (one or usually) several items in its primary or secondary
	packaging. Tertiary packaging may refer to either a logistic unit or a trade item.
tertiary partial pack	A homogenous pack of products that is not to be considered a trade item because it is less
, i r	than full.
traceability	the ability to track forward the movement through specified stage(s) of the extended supply
	chain and trace backward the history, application, or location of a pharmaceutical product.
track and trace	The business process of tracking forward and tracing back a uniquely identifiable "traceable
and trace	item" at any point along the entire supply chain from creation to the point of sale, use, or
	Them at any point along the chair supply chain from creation to the point of sale, use, of

	destruction. Track and trace requires trading partners to exchange data for defined events and provide the what, when, where, and why about trade items as they move through the supply chain.
trade item*	Any item (product or service) upon which there is a need to retrieve predefined information and that may be priced, or ordered, or invoiced at any point in any supply chain.
transactional data	The information exchanged between two organizations about the products and services they are selling, ordering, delivering, receiving, invoicing and paying for.
unique identifier	A numeric or alphanumeric string captured in a machine-readable data carrier and human-readable form on the label of the pharmaceutical package that is associated with a single product or product group.
verification	Determining whether the unique identifier affixed to, or imprinted upon, a pharmaceutical package corresponds to the unique identifier assigned to the product by the manufacturer or the repackage.
